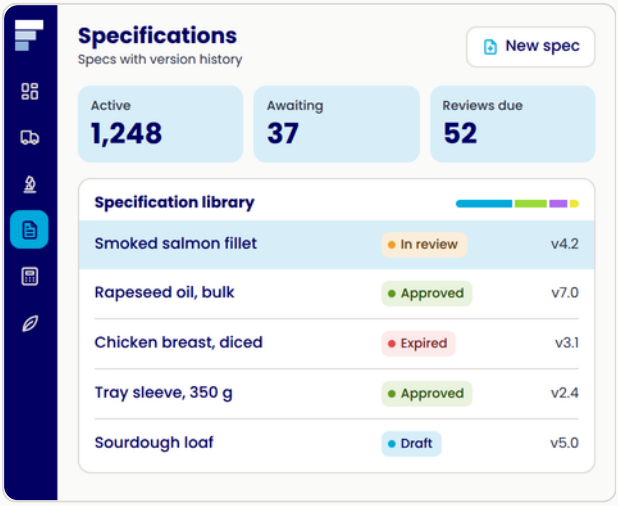
SPECIFICATION MANAGER

Build once, stay current, sign off faster with our Specification Manager solution

A specification nobody can trust is worse than no specification at all

Manual specifications — built in spreadsheets, email, static PDFs or stored in legacy systems — drift out of date the moment an ingredient, supplier or pack changes, leaving teams working from different versions of the truth. Specification Manager puts every specification on one connected, version-controlled record, shared live with suppliers and internal teams, so everyone always works from what's current



46 min saved per specification check on average

300% average return on investment

One version of the truth, for everyone

A specification is only useful if everyone is working from the same, current version — here's what that looks like in practice.

Always current

Every specification lives in one place, so nobody works from an outdated version.

No re-keying

Update a specification once, and the change flows to everyone who needs it.

Shared with suppliers

Suppliers see and confirm the same live specification you do, not a static PDF.

Faster sign-off

Specification reviews and approvals happen in the system, not an email chain.

From first draft to final sign-off, in one workflow

Specification Manager brings specification creation, revision control and supplier sign-off together in a single connected workflow.

✓ **Specification builder**	Create and manage specifications using configurable templates built for food.
✓ **Revision control**	Every change version-controlled and auditable, so you always know what changed and when.
✓ **Labelling**	Generate compliant labelling directly from the connected specification.
✓ **Supplier sign-off**	Suppliers review and confirm specifications directly on the platform, not over email.
✓ **Connected to suppliers & quality**	Specifications linked to the supplier and quality records they depend on.
✓ **Self-serve**	Build your own specification templates and workflows with the form builder.
✓ **Reporting & automation built in**	Live dashboards show specification status and outstanding sign-offs at a glance.
✓ **Enterprise-ready integration**	ISO 27001 certified, built to connect with existing systems, with proven ERP integrations.

Simple steps to a trusted specification:

1

Build the specification

Create and manage specifications using configurable templates built for food.

2

Control every revision

Every change is version-controlled and auditable, so you always know what changed and when.

3

Share for sign-off

Suppliers review and confirm specifications directly on the platform, not over email.

4

Connect and report

Linked specifications, live status dashboards and visibility of outstanding sign-offs.

> ***"The Foods Connected Specification management tools have allowed us to simplify, standardise and collate all our product data across a multitude of suppliers meaning we have access to the data we need as we need it."***
>
> **— Laura Robinson, Regional Director, Finnebrogue**
