FOODS CONNECTED

ANALYTICS MANAGER

Analytics Manager helps you see what's coming, not just what happened

Scattered data can't warn you about what's going to go wrong

Supplier, product, quality and cost data scattered across separate systems makes it hard to see risk and performance in the round, so reporting becomes a manual, backward-looking exercise rather than something you can act on. Analytics Manager turns the data already captured across the platform into live dashboards and reports, so you can see what's happening — and what's about to — in one place.

100+ of the world's leading brands trust Foods Connected

40% average reduction in compliance reporting effort

One source of truth, built for faster decisions

When reporting draws on data that's already connected, you spend less time building reports and more time acting on what they show.

See risk before it lands

Live dashboards surface supplier and product risk as it emerges, not after the fact.

No more manual reporting

Reports created from data already captured across the platform, not a spreadsheet exercise.

One version of the truth

Every team works from the same connected data, not their own extract.

Decisions, not just dashboards

Trends and outliers surfaced automatically, so you know where to look first.

Dashboards, reports and alerts, built on data you already have

Analytics Manager brings live dashboards, automated reporting and alerting together, built on the data already captured across the platform.

✓ **Live dashboards**	See supplier, product, quality and compliance performance in real time, not a static monthly report.
✓ **Automated reporting**	Reports created from connected data, ready to share with your team or the board.
✓ **Automatic alerts**	Get notified the moment a metric, certificate or risk threshold needs attention.
✓ **Dashboards on demand**	Access the dashboards and reports each team needs, without a developer.
✓ **Connected across the platform**	Analytics draw on supplier, specification, quality, compliance and cost data in one place.
✓ **Benchmarking**	Compare supplier and product performance against your own targets and historical trends.
✓ **Enterprise-ready integration**	ISO 27001 certified, built to connect with existing systems, with proven ERP integrations.

The steps that take you from data to decision

1

Connect the data

Supplier, specification, quality, compliance and cost data already captured across the platform feeds in automatically.

2

See it live

Dashboards and reports build themselves from that connected data, in real time.

3

Get alerted

Automatic alerts flag the moment a metric, certificate or risk threshold needs attention.

4

Compare and act

Benchmark performance against targets and trends, so you know where to focus next.

> ***"Using Foods Connected has allowed us to drive standard processes across our business, helping capture data in a consistent way meaning the analytics allows us to easily see comparable performance on any level."***
