FOODS CONNECTED

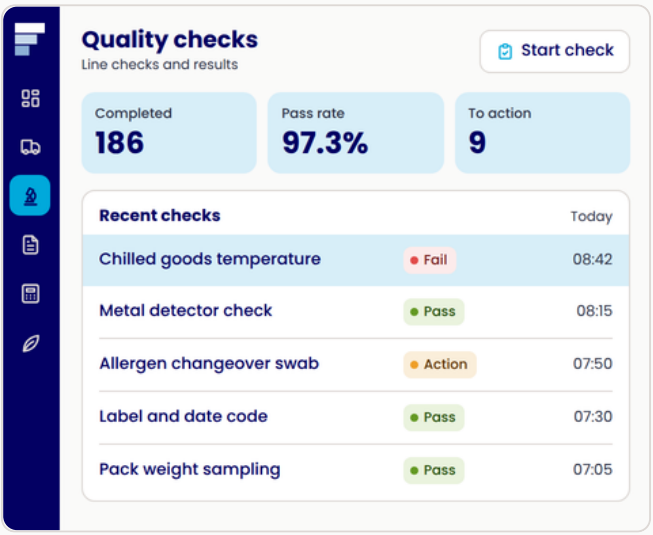

FOOD SAFETY & QUALITY

Catch product non-conformance before it reaches the shelf with our Food Safety & Quality solutions

An unseen quality issue is the one that costs the most

Food safety, HACCP and product non-conformance data often sit in disconnected checklists, spreadsheets and inboxes. A missed inspection or an unresolved non-conformance can then turn into a recall before anyone joins the dots.

Foods Connected's Quality Management solution puts food safety, HACCP, inspection and non-conformance on one connected platform, built to catch product risk before it becomes a cost.

100+ of the world's leading brands trust Foods Connected

85% average increase in annual audit completion

Fewer recalls. Fewer surprises. Products to stand behind.

Connected quality data means issues are caught early and every record is ready when it's needed, from first report to final audit.

Non-conformance caught early

Product issues flagged and tracked from first report to close-out, not lost in an inbox.

Fewer recalls, less rework

Food safety and HACCP data connected to specifications, so a change upstream doesn't become a surprise downstream.

Always audit-ready

Every inspection, corrective action and HACCP record lives in one place, ready for any auditor.

Faster to shelf

Quality data connected to NPD and specs, so products aren't held up chasing sign-off.

Everything needed to manage, track and prove product quality, in one place

One platform covers the full quality workflow, from non-conformance to inspection, alongside the specification and supplier data it depends on.

✓ **Quality management workflows**	Log, track and resolve product non-conformance from a single connected workflow, not a spreadsheet.
✓ **Food safety & HACCP**	Build and manage HACCP plans and food safety checks alongside the specifications and suppliers they relate to.
✓ **Product non-conformance tracking**	Every non-conformance recorded with root cause and corrective action, tracked through to close-out.
✓ **Inspection management**	Plan, run and record product inspections, with results feeding straight back into supplier and specification records.
✓ **Connected to specs & suppliers**	Quality data sits alongside specifications and supplier records, so a change in one flags a review in the other.
✓ **Self-serve**	Build your own quality forms and workflows with the form builder, with no IT ticket required.
✓ **Reporting & automation built in**	Live dashboards and automatic alerts replace manual chasing of open non-conformances.
✓ **Enterprise-ready integration**	ISO 27001 certified, built to connect with existing systems, with proven ERP integrations.

From connected data to confident product quality decisions

1 — Record

Log non-conformances and inspections in one connected workflow.

2 — Connect

Link food safety and HACCP data to specifications and suppliers.

3 — Resolve

Track root cause and corrective action through to close-out.

4 — Prove

Show audit-ready records on demand with live dashboards.

> ***Foods Connected has allowed us to continue to audit suppliers both remotely and in person to streamline our supplier management process giving greater visibility and control.***
