FOODS CONNECTED

Production Models helps you catch margin loss before it costs you

You can't manage a margin you can't see

Production costs, pricing grids and yield performance too often sit in separate legacy systems and spreadsheets, so it's hard to benchmark actual yields against target, or see the true cost and margin behind a price. Production Models connects pricing grids, cost files and yield data on one platform, so you can see — and act on — the real performance behind every product.

100+ of the world's leading brands trust Foods Connected

3–6% average cost savings achieved annually

Real performance, benchmarked against target

When cost, price and yield data live in one place, you can act on performance, not just report on it afterwards.

See the real margin

Cost, price and yield data connected, so you can see the true margin behind every product, not just the headline price.

Benchmark actual vs target

Yield Trees show actual performance against target for every cut, so you know exactly where to improve.

Fewer disputes, more trust

Suppliers see the same accurate, consistent performance and payment data, so deductions become rare, not routine.

Sustained savings, not one-off

Real-time visibility of production costs and yields drives considerable, sustained savings within months, not years.

Pricing, cost and yield data, finally connected

Production Models connects pricing grids, cost and price files, kill data and yield benchmarking in one configurable platform.

✓ **Pricing grids**	Fully customisable pricing grids linked to livestock contracts and purchase orders, with multiple approvers and statuses.
✓ **Cost & price files**	Connected cost and price data behind every product, not a spreadsheet rebuilt from scratch each time.
✓ **Data & supplier feedback**	Data flows automatically from the factory floor into carcass performance, penalties and payment.
✓ **Yield trees & benchmarking**	Set target yields for every cut, including 5th quarter and offal, and measure actual performance against them.
✓ **Real-time dashboards & BI reports**	Monitor progress daily, with monthly executive comparison reports from the Foods Connected BI team.
✓ **E-negotiations & contracts**	Compare supplier offers and review historic negotiations, connected to the specifications they relate to.
✓ **Self-serve**	Configure pricing grids, yield targets and views yourself. No IT resource or ticket required.
✓ **Enterprise-ready integration**	ISO 27001 certified, built to connect with existing systems, with proven ERP integrations.

Go from uneven yield data to clear margin

1. **Set the pricing grid**
   Fully customisable pricing grids linked to livestock contracts and purchase orders.
2. **Capture data automatically**
   Data flows automatically from the factory floor into carcass performance, penalties and payment.
3. **Benchmark against target**
   Set target yields for every cut, including 5th quarter and offal, and measure actual performance against them.
4. **Act on real-time insight**
   Monitor progress daily, with monthly executive comparison reports from the Foods Connected BI team.
