FOODS CONNECTED

RECIPE MANAGER

Stop a wrong ingredient becoming a wrong label with Recipe Manager

Nutrition data is only as good as the system calculating it

Recipe and nutrition data too often live in a separate system from specifications and raw materials, which means a change to an ingredient or supplier never updates the calculated nutrition, and a wrong input then becomes a wrong label. Recipe Manager connects raw material specifications, recipes and calculated nutrition into one live data source, so what you declare on pack is only ever built from what's actually in the product.

100+ of the world's leading brands trust Foods Connected

1 live data source for specs, recipes and nutrition

Nutrition and recipe data you can trust

When nutrition is calculated from the same connected recipe and raw material data every time, the mismatches that come from two disconnected systems simply stop happening. This is the result:

Accurate nutrition, by design

Calculated nutrition built directly from the recipe and raw material data behind it, not re-keyed from a separate system.

No more mismatched data

One connected source for specs, recipes and nutrition removes the errors that come from systems that don't talk to each other.

Confident at scale

Formulate and recalculate across more products at once, without data quality dropping as volume rises.

Faster to a compliant label

Allergen, nutrition and ingredient declarations draw from the same live recipe, not a manual cross-check.

Every recipe, formulated and calculated from connected data

Recipe Manager brings formulation, nutritional calculation and raw material data together in one connected record.

✓ **Recipe & formulation builder**	Build and manage recipes and formulations linked directly to raw material specifications.
✓ **Calculated nutrition**	Nutrition calculated automatically from the recipe and ingredient data, not entered a second time.
✓ **Connected to raw material specs**	A change to a raw material specification flows through to every recipe that uses it.
✓ **Allergen & dietary flags**	Allergen and dietary information inherited from the recipe's ingredients, not tracked separately.
✓ **Version control**	Every recipe change version-controlled and auditable, so you always know what changed and when.
✓ **Self-serve**	Build your own recipe templates and calculation rules with the form builder. No IT resource or ticket required.
✓ **Reporting & automation built in**	Live dashboards show recipe and nutrition status across your range, at a glance.
✓ **Enterprise-ready integration**	ISO 27001 certified, built to connect with existing systems, with proven ERP integrations.

Move from raw material to compliant label:

1. **Build the recipe**
   Build and manage recipes and formulations linked directly to raw material specifications.
2. **Calculate nutrition automatically**
   Nutrition is calculated automatically from the recipe and ingredient data, not entered a second time.
3. **Flag allergens automatically**
   Allergen and dietary information is inherited from the recipe's ingredients, not tracked separately.
4. **Update everywhere, instantly**
   A change to a raw material specification flows through to every recipe that uses it.

> ***"We introduced Recipe Manager so that our raw material specs, recipes, and calculated nutrition all became one live connected data source."***
>
> **— Lindsay Ferguson, Head of NPD, Freshpak**
