SPECIFICATION MANAGER

Build once, stay current, sign off faster with our Specification Manager solution

A specification nobody can trust is worse than no specification at all

Specifications built and shared across spreadsheets, email and static PDFs drift out of date the moment an ingredient, supplier or pack change happens. Teams end up working from different versions of the truth. Specification Manager puts every specification on one connected, version-controlled record, shared live with suppliers and internal teams, so everyone always works from what's current.

46 min saved per specification check on average

300% average return on investment

One version of the truth, for everyone

A specification is only useful if everyone is working from the same, current version — here's what that looks like in practice.

Always current

Every specification lives in one place, so nobody works from an outdated version.

No re-keying

Update a specification once, and the change flows to everyone who needs it.

Shared with suppliers

Suppliers see and confirm the same live specification you do, not a static PDF.

Faster sign-off

Specification reviews and approvals happen in the system, not an email chain.

From first draft to final sign-off, in one workflow

Specification Manager brings specification creation, revision control and supplier sign-off together in a single connected workflow.

✓ **Specification builder**	Create and manage specifications using configurable templates built for food.
✓ **Revision control**	Every change version-controlled and auditable, so you always know what changed and when.
✓ **Labelling**	Generate compliant labelling directly from the connected specification.
✓ **Supplier sign-off**	Suppliers review and confirm specifications directly on the platform, not over email.
✓ **Connected to suppliers & quality**	Specifications linked to the supplier and quality records they depend on.
✓ **Self-serve**	Build your own specification templates and workflows with the form builder.
✓ **Reporting & automation built in**	Live dashboards show specification status and outstanding sign-offs at a glance.
✓ **Enterprise-ready integration**	ISO 27001 certified, built to connect with existing systems, with proven ERP integrations.

Simple steps to a trusted specification:

1

Build the specification

Create and manage specifications using configurable templates built for food.

2

Control every revision

Every change is version-controlled and auditable, so you always know what changed and when.

3

Share for sign-off

Suppliers review and confirm specifications directly on the platform, not over email.

4

Connect and report

Linked specifications, live status dashboards and visibility of outstanding sign-offs.

> ***"The Foods Connected Specification management tools have allowed us to simplify, standardise and collate all our product data across a multitude of suppliers meaning we have access to the data we need as we need it."***
