FOODS CONNECTED

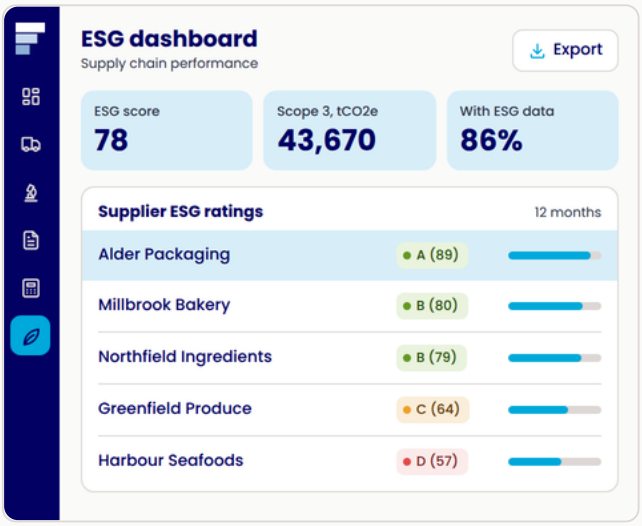

SUSTAINABILITY

Turn ESG and compliance data into action, not just a report, with our Sustainability solutions

Sustainability reporting can't just be an annual scramble

ESG, animal welfare and deforestation data are too often pulled together once a year from disconnected sources, spreadsheets and supplier questionnaires. That is reactive, backward-looking, and disconnected from the specifications and suppliers it should inform.

Foods Connected's Sustainability solution connects ESG benchmarking, animal welfare and EUDR / deforestation data to the same supplier and specification records already managed, turning sustainability data into ongoing action, not an annual report.

100+ of the world's leading brands trust Foods Connected

5% average increase in BBFAW scores

Data that leads to action, not just reports.

Connected sustainability data means decisions are made on live numbers, shared across reporting and buying, all year round.

Sustainability data you can act on

Connected to suppliers and specs, so ESG and welfare data drives decisions, not just a report.

Ahead of tightening regulation

Deforestation and EUDR data structured and ready, before it becomes a compliance deadline.

One version of the truth

ESG and welfare data shared across teams, so reporting and buying decisions use the same numbers.

Less annual scramble

Data collected continuously from the supplier network, not chased once a year for a report.

Everything you need to capture, benchmark and report sustainability data, in one place

One platform covers the full sustainability workflow, from supplier data capture to board-ready reporting, alongside the supplier and specification records it depends on.

✓ **Sustainability data capture**	Collect ESG, welfare and environmental data directly from suppliers, on the same platform they already use.
✓ **ESG benchmarking**	Compare supplier and product performance against company targets and industry benchmarks.
✓ **Animal welfare**	Track animal welfare data and standards (e.g. BBFAW-aligned metrics) alongside supplier approval and audit records.
✓ **EUDR & deforestation**	Structure deforestation and EUDR due-diligence data ready for regulatory reporting, not built from scratch each time.
✓ **Reporting & automation built in**	Live dashboards turn supplier-submitted data into reportable, board-ready output.
✓ **Connected to suppliers & specs**	Sustainability data sits alongside the supplier and specification records it should inform.
✓ **Self-serve**	Build specification templates and workflows with the form builder. No IT resource or ticket required.
✓ **Enterprise-ready integration**	ISO 27001 certified, built to connect with existing systems, with proven ERP integrations.

From connected data to confident sustainability decisions:

1 Capture

Collect ESG, welfare and deforestation data from suppliers on one platform.

2 Connect

Link it to the supplier and specification records it should inform.

3 Benchmark

Compare performance against company targets and industry benchmarks.

4 Report

Turn live data into board-ready, regulator-ready output.

> ***"Foods Connected provided support to OSI when we were designing and implementing our supplier sustainability benchmark. We were able to streamline our communications with our suppliers and eliminate over-use of emails."***
